

DIGITAL LITERACY PROJECT REPORT

Name: Sakshi Singh

Registration No.: 25BCE11287

Branch: B. Tech CSE Core

Year: First Year (2025-2026)

Course Code: CSE0001

Date: 31 March 2026

INTRODUCTION

Digital literacy is an essential skill in the modern technology-driven world, where technology plays a major role in education, communication, and everyday activities. It involves the ability to effectively use digital tools, access and evaluate information, and communicate responsibly and effectively in an online environment. As a Student Digital Ambassador, the aim of this project is to spread awareness about the importance of digital literacy among peers.

This project includes multiple tasks such as creating an infographic, building a digital portfolio, exploring coding and collaboration platforms, practicing professional communication, and understanding cybercrime. Each task helped in gaining practical knowledge of digital tools and their importance in academic and professional life.

Through this project, I have developed a better understanding of responsible digital behaviour, online safety, professional digital presence, and responsible use of technology. It highlights how digital literacy is important for both academic success and future career growth.

Task 1: INFOGRAPHIC

TOOLS USED

For this task, I used Canva. It is an online design tool or platform that provides a wide range of templates, icons, and customization options for creating visually appealing content. It is user-friendly and allows beginners to create professional-quality designs without any prior experience.

WHAT I CREATED

I created a digital literacy awareness infographic that includes important topics such as the definition of digital literacy, safe internet practices, useful digital tools for students and professional online presence. The infographic was designed using a structured layout with proper headings and colour combinations to ensure clarity and visual appeal. The goal was to present information in a simple way so that it can be easily understood by students.

REFLECTION

While creating the infographic, I faced a challenge or difficulty in selecting the right template and balancing the information within a single page. Initially, the design looked crowded, but by simplifying the content and using proper spacing, I improved its readability. This task helped me improve my creativity, design thinking, and the ability to present information visually.

Task 2: STUDENT DIGITAL PORTFOLIO

PLATFORMS SET UP

For Task 2, I created accounts on three professional platforms: GitHub, LinkedIn, and Stack overflow. Each platform serves a distinct purpose in building a digital presence.

PURPOSE OF EACH PLATFORM

GitHub is a platform used for hosting, managing and sharing coding projects, which helps in building a strong technical portfolio. It allows developers to showcase their work and collaborate with others.

LinkedIn is a professional networking platform where students can connect with industry professionals, explore career opportunities, and build a professional identity.

Stack Overflow is a question-and-answer platform where developers ask and answer programming-related questions. It helps users learn from real-world problems, find solutions quickly, and improve their coding knowledge through community interaction.

FUTURE PLANS

Over the next four years, I plan to actively update my GitHub with personal and academic projects, build a strong professional network on LinkedIn, and actively participate on Stack Overflow by asking questions and learning from others' solutions. This will help me improve my problem-solving skills and gain practical knowledge in programming.

Task 3: PLATFORMS

PLATFORMS USED

For this task, I explored Google Forms for collaboration and data collection and HackerRank for coding practice.

WHAT I PRACTISED/BUILT

On HackerRank, I completed a beginner-level coding challenge which helped me understand basic programming concepts, logic and improve my problem-solving skills. It improved my confidence in solving simple problems. I also created a Google Form titled “Digital Literacy Awareness Quiz” with five questions, including both multiple-choice and short-answer types. The form was designed to assess the basic understanding of digital literacy concepts among students.

LEARNING OUTCOME

This task helped me understand how these coding platforms are useful for academic purposes as they can improve logical thinking, problem-solving skills and collaboration. It also showed how tools like Google Forms can be used to collect data, conduct quizzes, and analyse responses efficiently. This task helped me gain practical experience in using online tools effectively.

Task 4: EMAIL ETIQUETTE

COMMUNICATON SCENARIO

In this task, I practiced and worked on professional communication by drafting two emails. The first email was written from a student to their professor requesting an extension on an assignment submission deadline, and the second email was written from a student to an internship coordinator at a company expressing interest in a summer internship opportunity. Both emails were written using a formal tone and proper structure.

KEY LEARNINGS

Through this task, I learned the importance of using a clear subject line, polite tone, respectful greeting, and well-structured content in emails. I also understood that maintaining a polite and professional tone is essential in digital communication. Poor digital communication can create misunderstandings and leave a negative impression. This task improved my communication skills and helped me understand the importance of email etiquette in academic and professional settings.

Task 5: CYBERCRIME AWARENESS

WHAT SURPRISED ME

While I was researching about phishing, I was surprised by how convincing and realistic fake emails and websites can appear. Attackers often use logos, formatting, and urgent messages to make their communication appear genuine. This makes it difficult for users to identify fraudulent messages. Therefore, many users fall victim because they are unable to identify these threats easily.

ONE HABIT I WILL CHANGE

One habit I will change is that I will become more cautious while using digital platforms. I will always verify links, check the authenticity of emails, and avoid sharing personal information online without proper confirmation. This awareness will help me stay safe from cyber threats and encourage responsible digital behaviour.

CONCLUSION

In this project, I explored the concept of digital literacy and its importance in today's technology-driven world. This project helped me understand the importance of effectively using digital tools and online platforms in everyday academic work. Through the completion of different tasks, I gained practical knowledge about how to search, evaluate, and use information from the internet in a responsible and meaningful way.

I learned how to effectively use online platforms, search for reliable information, and apply digital tools to solve problems. Platforms such as Stack Overflow and other educational websites played an important role in helping me solve problems and improve my understanding of concepts related to digital literacy.

This project also improved my technical and analytical skills, as I had to organize information in a structured format and present it clearly in the report. It enhanced my confidence in using digital resources for learning, communication, and problem-solving.

Overall, this project has strengthened my technical skills, critical thinking, and confidence in using digital tools, which are essential for academic and professional growth in the modern era.
